

DOW FILMTEC™ Sanitary RO Membranes

Reverse Osmosis Elements for Food & Beverage Water Applications

Description

IDEAL for: Water Treatment Plant managers and operators looking for a state-of-the art Sanitary Desalination solution for reducing CAPEX and OPEX in Food & Beverage

DOW FILMTEC™ reverse osmosis (RO) membrane elements contain sanitary, high-rejection FT30 reverse osmosis membrane that has been successfully used to process a wide range of food and beverage streams including Bottled Water, Juice, Soft Drinks, non-Dairy milk products and many others

Certified to NSF/ANSI 61

These elements deliver high flux and outstanding quality water for applications requiring sanitary grade membrane elements.

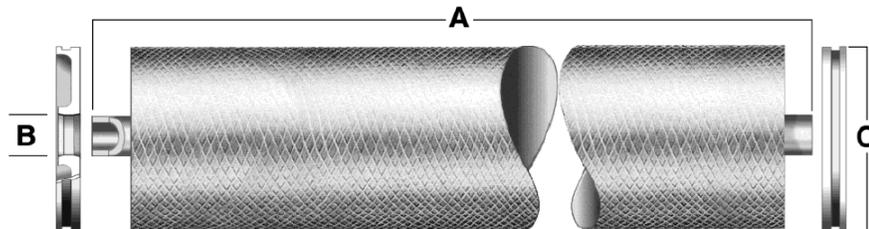

The full-fit configuration minimizes stagnant areas and is optimal for applications requiring a Sanitary design. All components comply with FDA indirect food contact.

Product Overview

DOW FILMTEC™ Membranes	Part Number	Active Area ft ² (m ²)	Stabilized Permeate Flow Rate gpd (m3/d)	Typical Stabilized Salt Rejection (%)
RO-4040-FF	84286	90 (8.36)	2650 (10.0)	99.5
RO-390-FF	116314 / 100608	390 (36.23)	13,700 (51.8)	99.5

1. Permeate flow and salt rejection based on standard conditions: 2,000 ppm NaCl, 225 psi (16 bar), 77°F (25°C), pH 8 and 15% recovery.
2. Minimum stabilized salt rejection is 98.0%.
3. RO-390-FF Flow rates for individual elements may vary but will be no more than ±15%
4. RO-4040-FF Flow rates for individual elements may vary but will be no more than ±21%
5. Stabilized salt rejection is generally achieved within 24-48 hours of continuous use; depending upon feed water characteristics and operating conditions.

Element Dimensions

DOW FILMTEC™ Membranes	A		B		C	
	(in.)	(mm)	(in.)	(mm)	(in.)	(mm)
RO-4040-FF	40.00	1,016	0.75 OD	19	3.9	99
RO-390-FF	40.00	1,016	1.125 ID	28.58	7.9	200

Operating and Cleaning Limits

• Membrane Type	Thin-Film Composite
• Maximum Operating Temperature	113°F (45°C)
• Maximum Operating Pressure	600 psi (41 bar)
• Maximum Differential Pressure	15 psi (1.0 bar)
• Maximum Feed Turbidity	1 NTU
• Free Chlorine Tolerance	Below Detectable Limits
• pH Range, Continuous Operations	3 – 10
• pH Range, Short-Term Cleaning (30 min)*	1 – 12
• Maximum Feed Silt Density Index (SDI)	5

* Refer to Cleaning Guidelines Specifications sheet 609-23010

Additional Important Information

Proper start-up of reverse osmosis water treatment systems is essential to prepare the membranes for operating service and to prevent membrane damage due to overfeeding or hydraulic shock. Following the proper start-up sequence also helps ensure that system operating parameters conform to design specifications so that system water quality and productivity goals can be achieved.

Before initiating system start-up procedures, membrane pretreatment, loading of the membrane elements, instrument calibration and other system checks should be completed.

Please refer to the application information literature entitled “Start-Up Sequence” (Form No. 609-00298) for more information.

Operation Guidelines

Avoid any abrupt pressure or cross-flow variations on the spiral elements during start-up, shutdown, cleaning or other sequences to prevent possible membrane damage. During start up, a gradual change from a standstill to operating state is recommended as follows:

- Feed pressure should be increased gradually over a 30-60 second time frame.
- Cross-flow velocity at set operating point should be achieved gradually over 15-20 seconds.
- Permeate obtained from first hour of operation should be discarded.

General Information

- Keep elements moist at all times after initial wetting.
- If operating limits and guidelines given in this bulletin are not strictly followed, the limited warranty will be null and void.
- To prevent biological growth during prolonged system shutdowns, it is recommended that membrane elements be immersed in a preservative solution.
- The customer is fully responsible for the effects of incompatible chemicals and lubricants on elements.
- Maximum pressure drop across an entire pressure vessel (housing) is 60 psi (4.1 bar).
- Avoid permeate-side backpressure at all times.

Product Stewardship

Dow has a fundamental concern for all who make, distribute, and use its products, and for the environment in which we live. This concern is the basis for our product stewardship philosophy by which we assess the safety, health, and environmental information on our products and then take appropriate steps to protect employee and public health and our environment. The success of our product stewardship program rests with each and every individual involved with Dow products—from the initial concept and research, to manufacture, use, sale, disposal, and recycle of each product.

Customer Notice

Dow strongly encourages its customers to review both their manufacturing processes and their applications of Dow products from the standpoint of human health and environmental quality to ensure that Dow products are not used in ways for which they are not intended or tested. Dow personnel are available to answer your questions and to provide reasonable technical support.
